PROFESSIONAL SUMMARY

Results-driven Data Engineer with 5 years of experience building scalable data pipelines, Lakehouse solutions, and cloud-native ETL frameworks across insurance and financial services domains. Deep expertise in Azure and AWS with a strong track record of delivering actionable insights via Power BI and Snowflake. Experienced in leading engineering teams and working closely with data scientists in fast-paced production environments.

TECHNICAL SKILLS

Languages	Python, SQL, PySpark, JavaScript, VBA
Data Engineering	ETL / ELT, Medallion Architecture (Bronze/Silver/Gold), Data Modeling, Data Quality, Schema Validation, Data Lineage, dbt
Big Data & Processing	Apache Spark, PySpark, Spark SQL, Pandas, NumPy, Databricks, Apache Kafka, Debezium CDC
Cloud - Azure	Azure Databricks, Azure Data Factory (ADF), ADLS Gen2, Delta Lake, Unity Catalog, Databricks Jobs & Workflows, Azure DevOps
Cloud - AWS	S3, Glue, Lambda, EC2, API Gateway, CloudWatch, IAM
Data Visualization	Power BI, Qlik Sense, Matplotlib, Pivot Tables / Charts
Databases	MySQL, PostgreSQL, PostGIS, Delta Tables, Snowflake
DevOps & CI/CD	Git, BitBucket, GitHub Actions, Azure DevOps, Docker, Linux
Frameworks & Tools	Flask, Jupyter, VS Code, PyCharm, Anaconda, Scrapy, Selenium, Jira
Geospatial	GeoPandas, Shapely, PostGIS, GIS Data

WORK EXPERIENCE

Chubb – Bengaluru

Jul 2024 – Present

Data Engineer | Team Lead (4 Members)

- Architected end-to-end Lakehouse on Azure Databricks, ADLS Gen2, and Delta Lake implementing full Medallion architecture (Bronze / Silver / Gold) with data quality validation and reconciliation frameworks at every layer, supporting enterprise analytics across multiple insurance business units.
- Built production-grade ETL/ELT pipelines processing 1+ TB of policy, claims, and vendor data daily using PySpark and Spark SQL with embedded data quality gates and schema validation.
- Boosted Spark job performance by ~40% through adaptive query execution (AQE), broadcast joins, dynamic partitioning, and Delta OPTIMIZE / ZORDER tuning.
- Engineered automated ingestion for 18+ external vendor sources via ADF and Databricks Workflows, eliminating manual data handling and ensuring timely data availability for ML and BI pipelines.
- Contributed to migration of 500+ tables from Hive Metastore to Unity Catalog, enabling centralised governance, data lineage tracking, and RBAC access control.
- Established CI/CD pipelines on Azure DevOps for automated deployment of notebooks and workflows across dev / staging / prod, delivering curated Gold-layer datasets powering Power BI and Qlik Sense dashboards for business and C-suite stakeholders.
- Led a Snowflake-based data warehousing initiative; designed and built ELT pipelines using Python and dbt to ingest, transform, and serve structured datasets from ADLS into Snowflake for downstream analytics consumption.

- Migrated legacy Excel-based insurance pricing raters into scalable Python/PySpark-based rating engines on Databricks, enabling automated premium calculations, improved auditability, and faster rollout of business rule changes.

FinQuest – Bengaluru

Jul 2022 – Jul 2024

Data Engineer

- Designed and built a centralised M&A intelligence platform, ingesting and consolidating organisation data from 10+ heterogeneous sources including REST APIs, JSON feeds, web crawlers, and structured files to support merger and acquisition decision-making.
- Developed a custom in-house ETL framework in Python for automated data collection, cleaning, and validation across structured and semi-structured sources, reducing manual effort by ~40%.
- Implemented robust data quality checks, schema validation, and lineage tracking to ensure accuracy, completeness, and traceability of critical financial data flows.
- Re-engineered data infrastructure for enhanced scalability and automation, significantly reducing pipeline execution time and manual intervention overhead.
- Created and maintained detailed technical documentation and data dictionaries to support knowledge transfer and data governance across the engineering team.

Pataa Navigation – Indore

May 2021 – Jun 2022

Data Analyst

- Implemented a CDC pipeline using Debezium and Apache Kafka to stream real-time location data changes from PostgreSQL into PostGIS, enabling live geospatial analytics served via Flask.
- Developed a geospatial web service to visualise location-based analytics using GIS data stored in PostGIS, served via Flask and rendered with JavaScript mapping libraries (GeoPandas, Shapely).
- Built scalable web scrapers using Scrapy, Selenium, and BeautifulSoup to extract data from diverse sources; automated repetitive ETL and data-cleaning tasks through Python scripting.
- Implemented Shopify webhooks via AWS Lambda and API Gateway to capture real-time customer events; analysed data to uncover user behaviour patterns and friction points in the customer journey.
- Solely designed and developed a cross-browser extension (Chrome, Edge, Safari) that auto-fills address forms with a single tap, reducing address entry time for end users.

PROJECTS

Automated Data Quality Framework

- Built a data quality monitoring framework using Great Expectations and Python to validate and profile structured datasets.
- Implemented automated expectation suites with threshold-based alerting to detect schema drift and null violations before reaching downstream consumers.

Multi-Cloud ETL Pipeline

- Engineered an end-to-end ETL pipeline ingesting raw data from AWS S3, transforming with PySpark on Azure Databricks, and loading into Snowflake for analytics consumption.

EDUCATION

Bachelor of Science (Computer Science and Statistics)

Year of Passing: 2021 | Percentage: 73%

Govt. Holkar Science College, Indore

ACHIEVEMENTS

- Awarded the Medhavi Vidyarthi Scholarship (2018), a merit-based national scholarship.
- Head Boy, KVN (2017) - elected school-wide leadership role.
- Winner, Interschool Quiz Competition (2016).
